Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKFZ); Email s.wiemann@dkfz-heidelberg.de;
sequenced by MediGenomix (Martinsried/Germany) within the cDNA
sequencing consortium of the German Genome Project. This clone
(DKFZp686H1465) is available at the RZPD in Berlin. Please contact
the RZPD: Ressourcenzentrum, Heubnerweg 6, 14059
Berlin-Charlottenburg, GERMANy; Email: clone@rzpd.de Further
information about the clone and the sequencing project is available

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                                                                              receptor associated factor truncated protein (TRAP2TR) which is a splice variant of human TRAP2 protein. TRAP2TR has an ability to inhibit TMP alpha signalling pathways. The TRAP2TR variant is useful for inhibit TMP diseases involving hyperactivation of TWI TRAP2TR variant is useful for inhibiting involving hyperactivation of muclear factor kappa B (NFRB). The variant is also useful for inhibiting and treating inflammatory processes involving TWPalpha such as Crohn's disease, psoriasis, rheumatoid arthlists, graft versus host disease, non-insulin dependent diabetes, inflammatory bowel disease, and neurodegenerative diseases or cardiovascular disease such as cardiac ischaemia-reperfusion injury (collowing myocardial infarction, coronary artery bypass surgery, cardiac transplantation or ischaemia-reperfusion injury in the central nervous system (CNS) following stroke, the progression and rupture of advanced congestive heart failure, endothalial cell injury following balloon angioplasty, or apoptotic cell death of myocardial cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 360

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is a cDNA encoding tumour necrosis factor (TNF) -
receptor associated factor truncated-deleted (TRAF2TD) protein which is a
variant of human TRAF2TR (truncated). This sequence includes both the
naturally occurring splice variation and a deletion at the 5' end of
human TRAF2-FI (full-length) nucleic acid sequence. TRAF2TD has an
ability to inhibit TNF alpha signalling pathways. THE TRAF2TD variant is
useful for inhibiting diseases involving over production of TNFalpha,
TNFalpha pathologies involving Hyperactivation of muclear factor kappa B
(NFRB). The variant is also useful for inhibiting and treating
TNFalpha pathologies involving TNFalpha such as Crohn's disease,
CHAPB). The variant is also useful for inhibiting and treating
CHAPB). The variant dashes involving TNFalpha such as Crohn's disease,
Described a cardiovascular disease such as cardiac ischaemia-reperfusion
injury following myocardial infarction, coronary artery bypass surgery,
cardiac transplantation or ischaemia-reperfusion injury in the central
nervous system (CNS) following stroke, the progression and rupture of
congestive heart failure, endothelial cell injury following balloon
congestive heart failure, endothelial cell injury following balloon

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8
                                                                                     엄
                                                                                                                                                                                                                                          δ
                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to a purified complex comprising a lymphotoxin beta receptor (LTbetaR) polypeptide and Smac polypeptide. The lymphotoxin-beta receptor (LTbetaR) complex is useful for identifying modulators of LTbetaR activity or expression for treating or preventing cancer or an immune disorder such as autoimmune disorder, e.g. rheumatoid arthitis, systemic lupus erythematosus, Goodpasture's syndrome, Grave's disease, Hashimoto's thyroiditis, pemphigus vulgaris, myasthemia gravis, scleroderma, autoimmune haemolytic anaemia, autoimmune thrombocytopenic purpura, polymyositis, dermatomyositis, pernicious anaemia, Slogren's syndrome, ankylosing spondylitis, vasculitis, or type I diabetes mellitus. The present sequence is the coding sequence of a TRAF2 protein, which forms part of the complex of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         360

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a novel isolated, purified or recombinant polypeptide complex comprising a tumour necrosis factor alpha (TNF-alpha) polypeptide, a TNF-alpha receptor (TNFR) and a polypeptide selected from nuclear factor (NF)-kappab, activating kinase (NAK), RasGAP3, transducin repeat-containing protein (TRCP)1, TRCP2 and their variants, or their functional variants. The polypeptides of the invention demonstrate antinflammatory and cytostatic activities and may be useful for treating NF-alpha-related disorders, such as, inflammation or apoptosis, possibly via gene therapy. The current sequence is that of the TRAP2 cDNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to antisense oligonucleotides (see AAA55496 - A5557) which are targeted to nucleic acids encoding a human tumour necrosis factor receptor-associated factor (TRAF). The antisense requences comprise at least one modified internucleotide linkage, which is a phosphorothicate linkage. The oligonucleotides also include at least one modified super moiety such as a 2-O-methoxyethyl sugar moiety. Sequences AAA55496-A55495 represent nucleotide sequences encoding human TRAF1-6. Included in the invention is a method for treating a human having a disease associated with the expression of TRAF comprising administering an antisense oligonucleotide. The reduction of jun kinase activation in cells comprises contacting the cells with an antisense oligonucleotide targeted to TRAF-6. The selectin expression in cells or TRAF-6. The method for the reduction of F selectin expression in cells or TRAF-6. The method for the reduction of F selectin expression in cells or TRAF-6. The method for the reduction of F selectin expression in cells or tissues comprises contacting the cells or tissues with an antisense oligonucleotide have antiproliferative and anti-first inflammatory activity and are useful for treating disorders associated with cell proliferation and inflammation. The antisense oligonucleotides have antiproliferative selectines.

The present sequence is a cDNA encoding a full-length (i.e. non-spliced)

[Corm of human tumour necrosis factor (TNF)-receptor associated factor

[TRAF2] procein (referred to in the specification as TRAF2-FL. TRAF2-FL

has two variants, a splice variant of TRAF2 referred as "TRAF2 runcated"

[Corm of arther than a TRAF2 expression construct with enhanced dominant

[Corm of arther trafact of the specification of TRAF2-TD.

[Corm of TRAF2-TD are capable of inhibiting TNF alpha signalling

[Corm of the trafact of trafact of inhibiting diseases involving

[Corm of nuclear factor kappa B (NFRB). The variants are also

[Corm of nuclear factor kappa B (NFRB). The variants are also

[Corm of nuclear factor kappa B (NFRB). The variants are also

[Corm of nuclear factor kappa B (NFRB). The variants are also

[Corm of nuclear factor kappa B (NFRB). The variants are also

[Corm of nuclear factor kappa B (NFRB). The variants are also

[Corm of nuclear factor kappa B (NFRB). The variants are also

[Corm of nuclear factor kappa B (NFRB). The variants are also

[Corm of nuclear factor kappa B (NFRB). The variants are also

[Corm of nuclear factor kappa B (NFRB). The variants are also

[Corm of nuclear factor kappa B (NFRB). The variants are also

[Corm of nuclear factor kappa B (NFRB). The variants are also

[Corm of nuclear factor factor kappa B (NFRB). The variants are also

[Corm of nuclear factor kappa B (NFRB). The variants are also

The present invention describes a method (M1) for screening for an antineoplastic agent. The method involves exposing cells to a chemical agent to be tested for antineoplastic activity, determining a change in expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 8447 sequences (given in Ab161664 to Ab170110), or is at least 954 identical to (S), where a change in extivity and can be used in gene therapy. M1 can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of M1, and the data is sufficient to convey the chemical structure and/or properties of the agent. M1 can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidhey, prostate or pancreatic cancer, adenous cancer, infiltrating lobular cancer, squamous call carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set.
